

REMARKABLE PROCESS. REVOLUTIONARY PRODUCT.

5

REVOLUTION

The end result is a full line of EPA-compliant and ECOLOGO-certified bags in a variety of gauges and sizes that are distributed nationwide.

1

CROP IRRIGATION

Revolution Bag's sister company, Delta Plastics in Little Rock, Arkansas, creates agricultural polyethylene irrigation tubing. Tubing is used for one growing season.

2

RECYCLING

After one season of use, the tubing must be discarded. For more than 20 years, Delta Plastics has reclaimed and returned the tubing for recycling.

3

RESIN PRODUCTION

Used plastic is recycled at Delta Plastics' Stuttgart, Arkansas, plant through a patented process that transforms the materials from tubing to SCS-certified post-consumer recycled resin.

4

BAG MANUFACTURING

Resin is transferred to Revolution Bag in Little Rock, Arkansas, where it is converted to blown film and trash bags are produced.
