

XLERATOR® = HAND HYGIENE

"Once your hands are cleaned, you should dry them thoroughly by using paper towels or a warm air dryer."

"We have no evidence that hand dryers are spreading the coronavirus..."

"Are hand dryers spreading the coronavirus? Our experts said no. There is no evidence that these hand dryers are spreading the virus."

HERE'S HOW WE'VE HELPED FOUR FACILITIES **RAISE THE BAR ON HAND HYGIENE**
IN SENIOR LIVING, HEALTHCARE, PUBLIC TRANSPORTATION AND HOSPITALITY

“I would definitely recommend other healthcare facilities and continuing care retirement communities use the XLERATOR. I believe the restrooms are more hygienic because you don’t have the soiled paper laying around on the floor or counters.”

■ **RICHARD HEATH,**
CEO

SEABURY RETIREMENT COMMUNITY

PROTECTING OUR MOST VULNERABLE CITIZENS

The elderly are often at greater risk for disease, due to compromised immune systems and underlying conditions that weaken their defenses against viruses. That’s why Seabury, a leading edge active Life Plan Community for residents over the age of 50, upgraded their facilities with the high-speed, energy-efficient XLERATOR.

After disappointing results in function and performance from hand dryers by other manufacturers, CEO Richard Heath is pleased with the XLERATOR, which has been installed in areas where proper hygiene is of the utmost importance, such as the health clinic, skilled nursing areas, assisted living and independent living wings.

With hand drying solutions like XLERATOR protecting the health of Seabury’s residents, they can go about fulfilling the community’s motto—Get Busy Living.

NORTHWESTERN MEMORIAL HOSPITAL

GOOD HYGIENE SAVES LIVES

It's emergency time at world hospitals, where hand hygiene is crucial to preventing infection in patients. Hand hygiene starts in restrooms, where damp paper towel waste is too often left unattended, overflowing receptacles and spreading bacteria.

After researching hand drying solutions, Northwestern Memorial Hospital in Chicago selected the XLERATOR as the most hygienic. The hospital's control board concluded that the XLERATOR's traditional, high-velocity air stream was hygienically superior to trough-style hand dryers, citing concerns that the troughs could catch and hold pools of water that could breed bacteria.

They made the switch to XLERATOR, installing more than 120 dryers in its restrooms. "After installing the dryers, our plumbing issues were eliminated and our bathrooms were cleaner," says David Stout, Director of Facilities Engineering. "We look at this product like it was tailor-made for us."

At a time when hospitals are in greater demand, the hygienic XLERATOR Hand Dryer offers increased protection from bacteria and communicable diseases.

"A primary focus has been reducing maintenance needs while improving sanitation. As washrooms are renovated, we're installing equipment and materials that are much easier to maintain, have longer life spans and keep the restrooms sanitary."

GRAND CENTRAL TERMINAL

HYGIENIC PROTECTION FOR 750,000 DAILY VISITORS

New York City's renowned Grand Central Terminal hosts more than 750,000 daily visitors, with 44 train platforms, 35 restaurants and 68 shops. As part of a broad campaign to optimize its cleanliness and sustainability, the terminal chose the XLERATOR, not only a more hygienic hand drying solution, but a high-efficiency hand dryer that offers a 95% cost savings over paper towels.

The XLERATOR is a more hygienic solution than conventional hand dryers as well. Its no-touch, sensor-activated technology reduces touch points where contagion can spread.

When you're serving a small city in the biggest city of the world, every step toward better hygiene is a step in the right direction.

"Visitors don't want to touch something that hundreds of other people have touched."

ASSISTANT DEPUTY DIRECTOR
OF ELECTRICAL AND
MECHANICAL MAINTENANCE

MAX BURGER

EVERYONE DESERVES A CLEAN RESTROOM

Before making the switch to XLERATOR, Max Burger used approximately 750,000 paper towels a year. And the costs and waste were piling up.

Max Burger's bad experience with bacteria growing in their previous trough-style hand dryers was one factor in their choice of XLERATOR. Another was staff and customer health. XLERATOR's touch-free drying experience cuts down on cross-contamination. "The flu can wipe out half my staff in a day," says Taillefer.

Excel Dryer offers a HEPA Filtration System that removes 99.7% of potentially present bacteria and viruses at 0.3 microns from the air stream, and is the only hand dryer with a washable pre-filter and Antimicrobial Wall Guards. These features provide the ultimate hygienic restroom experience, sending diners and workers out into the world with cleaner hands.

"Your restrooms have to be as clean as your kitchen; that goes without saying. If you have a guest who goes into a dirty bathroom, they're going to be scared. They're going to be wondering what's going on their plate."

■ **TIM TAILLEFER,**
GENERAL MANAGER

*Dry time and energy use testing performed by SGS International on standard XLERATOR Hand Dryer with 0.8" nozzle to 0.25g or less of residual moisture, pursuant to the UL Environment Global Product Category Rules (PCR) for Hand Dryers.
